

Manual innoXplore iX-B22 A2DP Stereo Bluetooth Audio Adapter Dongle Receiver 3.5mm (Female) Audio Jack [iX-B22]

Use

This product can be used with a USB Bluetooth adapter, Bluetooth enabled mobile phone (must support stereo), and audio transmitters, supporting Bluetooth 2.1 + EDR, A2DP. Output interface can connect to the headphone cable, or speakers, so as to achieve the wireless transmission. The distance is up to 10M. In the below manual MFB means Multi Function button.

Charge

iX-B22 built in rechargeable battery. For the first time use, we recommend charging the completely. The red LED light goes on when charging.

Charging time:

The first time to charge the battery completely. It normally takes 2 hours. When fully charged, the red LED light goes out. Hold the multifunction button for 4 seconds to open the headset. See the next sections "Startup and Shutdown" iX-B22.

Working on Standby time

Completely fully charged battery, when connected to headphones the working time is 3 hours. When connected to speaker (this product works without the amplifier), working time is 6 hours, standby time is 140 hours.

Power is low

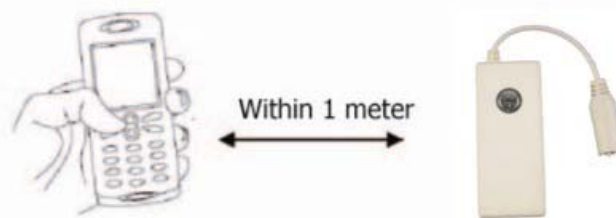

When the headset is turned on and when the power is low, the red LED indicator light flashes and makes a "beep" sound three times every 30 seconds. Follow these steps to charge the battery.

Turn on

Press the MFB for 4 seconds until you hear the beep sound. The blue LED light flashes 3 seconds.

Turn off

Press the MFB for 4 seconds until you hear the beep sound. The red LED light flashes 3 seconds and then goes out.

**Pairing to mobile phone**

1. Put this unit and mobile phone together. The best distance is within 1 meter.
2. Make sure the unit is turned off.
3. Press the MFB till the blue and red LED light flash alternately
4. Turn on the mobile Bluetooth function according to the user manual of subject mobile phone
5. Using the mobile to search this unit, then choose the pairing name "BTI-005"
6. Enter the pass key "0000", then this unit will connect with mobile, when you see the red light of the unit flash once and hear one beep sound. That means this pairing is successful. You can listen to music through this unit.

Pairing with Bluetooth Audio Transmitter

Firstly plugging this USB Bluetooth dongle into PC, then put this unit into pairing status (red and blue LED light flash alternately), using PC to search this unit (BTI-005), when the PC discovers it, please enter the pass key (0000) for connection. When the pairing is successful then turn on the music player, you can listen to music through this unit.

Notice:

When this unit is in pairing status, if you cannot finish the connection within 3 minutes, the pairing status will turn into standby status (blue LED light flashes). If you do not establish any operational connection within 10 minutes, this unit will automatically switch off. So if you would like to use this unit again, please switch it on again.

Solving problems

If you still can not establish a connection according to the above operation steps, please try the below ways:

1. Make sure this unit is powered on
2. Make sure the Bluetooth function of mobile phone is switched on. Please read the manual of mobile phone for reference.
3. Make sure the distance is within 10 meters between this unit and the mobile phone. And there is no obstruction between them. If this unit still can't work, please charge this unit.
